**Turbo** *Kits*®

Metra's Turbo Kits are manufactured of OEM-quality ABS plastic and designed with exacting tolerances. Each matches the factory dash contours perfectly - with no gaps between the dash and the kit. From basic to custom installs, perfection starts here.

# EVOLUTION IN RADIO REPLACEMENT KITS

75+ years and hundreds of dash kits later, Metra Electronics continues to innovate and adapt to changing vehicle technology, providing installers with a wide range of solutions for radio replacement. Our headquarters in Florida is a state-of-the-art facility that uses the highest quality ABS plastics and injection molding machines. The result is a seamless factory dash that has the contours, paint, texture, and fit of the OEM original. We're proud to make more dash kit solutions - that fit more vehicle applications - than anyone else in the world. It's why we've been known as "The Installer's Choice®" for more than 75 years.

## 1950s - 1970s

Giant presses pounding out heavy-gauge steel to make metal install kits, originally clad with vinyl, and eventually covered with a plastic trim plate. The DIN radio had not yet been introduced, so all kits were set up for 2-shaft radios.

## 1980s - 1990s

With the introduction of DIN radios, Metra needed to give installers a solution that would allow them to quickly install two-shaft, DIN, or ISO-DIN radios without fabricating custom parts, making them fit seamlessly into the dashboard with plastic kits. Innovation persists on into the 1990s with integrated parts with the ability to retain factory climate controls or airbag lights were added to plastic kits.

FACTORY STYLE TEXTURES

Electroluminescent light source duplicates OEM technology to provide a factory look and maintenance free durability that outlasts bulbs

## 2000s

These first fully-integrated kits were engineered to replace more than just the factory radio. Metra designed aftermarket climate controls into the plastics to allow for new radio installations. Laser-etched buttons, small display screens, airbag and seat belt indicators, and other important functions were built into the Turbo2® kits.

Smart interface technology automatically detects the vehicle and the vehicle's features. Integrated touchscreen and buttons retain and control all climate and vehicle customization functions normally lost when removing factory radio

# EVOLUTION IN RADIO REPLACEMENT KITS

## 2010s

Integrated patented touchscreen and buttons to retain and control all climate and vehicle customization functions

Smart interface technology automatically detects the vehicle and the vehicle's features

Touchscreen technology becomes popular with many drivers who prefer the sleek, high-tech look over factory-style hard buttons. TurboTouch® kits include a built-in patented touchscreen that can be personalized to control most of the OEM features of aftermarket radios without the need for additional integration products.

SEE DETAILS ON PAGE 203 OF PRODUCT LOCATOR SECTION

Metra Electronics is the only aftermarket dash kit manufacturer designing installation kits specific to the non-traditional DIN and Double-DIN radios that have been hitting the market. "There are many obstacles to overcome when designing installation kits for radios going into vehicles that have limited space. The new radio designs with less bulk provide Metra's engineers with more freedom in creating a product to install a sleek looking screen into a dashboard that doesn't have space for the larger footprint of the typical ISO Double-DIN radio that we've been designing for over the past 20 years. The new style radios are a major improvement to our industry and Metra is proud to be at the forefront of this trend with solutions to make installation seamless."

## 107 SERIES:

The 107 Series is designed specifically for ISO Double-DIN radios which have an "L" shaped chassis design, with the radio chassis at the bottom of the screen like the Alpine iLX-207 or the chassis at the top of the screen like the Sony XAV-AX5000. In some cases, the kit can also be used for what we call shallow chassis mountable radios. These may be full height of traditional Double-DIN, but about half the depth, allowing for kits to be designed for cars without that depth. They are also designed for Pioneer modular 6.8" radios like the DMH-C2550NEX and DMHC2500NEX. A modular radio is a screen with a separate radio chassis that can be mounted up to 6 feet away (with the Pioneer products).

## 108 AND 109 SERIES FOR PIONEER 8" AND 9" MODULAR RADIOS:

The 108 Series is designed specifically for Pioneer's 8" modular solutions receiver (DMHC5500NEX). See radio manufacturer for current models and visit MetraOnline.com for up-to-date vehicle-specific applications. Metra's new 109 Series of dash kits are designed specifically for the 9" Pioneer modular solutions receiver (DMHWC6600NEX).

## THREE MULTI-APPLICATION "FLOATING" KITS FOR PIONEER MODULAR RADIOS:

Using a Double-DIN Metra kit mounted to the vehicle and then the 109-UN02, 108-UN02, or 107-UN02 mounts the Pioneer radio chassis into the dashboard and allows the Pioneer screen to float out in front of the factory radio opening. Instead of creating a whole new line of 1,000+ dash kits specifically for these radios, the universal kit allows an installer to take kits they already have and make them work for this, without custom fabrication.

Losing the ability to display vehicle settings on the screen is not only an inconvenience for many drivers but may prevent them from upgrading their audio system altogether. With Metra's new AXPIO solutions, installers can now offer a fully integrated package that will fit and function like the factory head unit.

The Axxess AXPIO Series by Metra Electronics includes an interface with plug-n-play harnessing that allows vehicle information and settings that were controlled on the factory screen to be retained, displayed and controlled on the Pioneer touchscreen. The settings retained will vary by vehicle and include telematics for GM and HVAC and personalization settings for Chrysler, Dodge and Jeep vehicles. A built-in data interface will also allow the installer to retain audio controls on the steering wheel, retain R.A.P. (Retained Accessory Power), and provide accessory power (12-volt 10-amp) and NAV outputs for parking brake, reverse, and speed sense.

Included with the package is a dash kit that will allow Pioneer's in-dash receivers to fit in the shallow space within the vehicle dashboard. The AXPIO Series works with Pioneer's Double-DIN 6.8-inch in-dash multimedia receivers, the DMH-W4660NEX and DMH-W4600NEX\*\*. These solutions are also compatible with Pioneer 9-inch receivers, the modular solutions DMH-WC6600NEX and the floating type DMH-WT7600NEX, as well as the floating type 10-inch receiver, the DMH-WT8600NEX, with the additional purchase of the Metra 109-UN02 floating mount kit\*\*.

## PLUG&PLAY

CONNECT AFTERMARKET RADIOS TO THE CAR  
FACTORY HARNESS WITH NO CUTTING,  
SPlicing OR SOLDERING!

### TURBO WIRE

#### Part Number Conversion

Model numbers represent the aftermarket radio type and corresponding Turbo Wire four digit part number suffix. For specific vehicle applications, see the Turbo Wire section of this catalog and the application chart at the back. A "universal" Smart Cable with 0001 as the suffix is the radio plug only with 5.5" wires and no vehicle side harness on the other end.

### COMBINATION DESIRED:

PIONEER Radio to GENERAL MOTORS 1988-2005  
JVC Radio to NISSAN 1995-UP\*  
ALPINE Radio to TOYOTA 1987-UP\*  
KENWOOD Radio to UNKNOWN VEHICLE

### HOW WE DO THE "MATH" & SMART CABLE PART #

PR01 + 70-1858 = **PR01-1858**  
JV16 + 70-7550 = **JV16-7550**  
AL16 + 70-1761 = **AL16-1761**  
KN16 + 0001 = **KN16-0001**

### EXAMPLES:

UNIVERSAL = 0001  
70-1002 = 1002  
70-1398 = 1398  
70-1677 = 1677  
70-1720 = 1720  
70-1743 = 1743  
70-1761 = 1761  
70-1763 = 1763  
70-1770 = 1770
